Education

Bachelor of Science in Computer Science | GPA: 3.6
Morehead State University – Morehead, KY
Expected Graduation: May 2026
Relevant Coursework: Algorithms, Data Structures, Programming Languages, Computer Architecture, Software Engineering, Network Security, Parallel Programming (OpenMP), Machine Learning
MSU ACM Outstanding Computer Science Student

Experience

IT Intern | Team Modern |June 2025 - August 2025

- Engineered and reconstructed dozens of C# programs during a server migration.
- Deployed over 100 C# applications to the company's server for electronic delivery of warehouse reports.
- Organized directories and code formatting at a large scale including some SQL database experience.
- Updated decade or older programs to .NET Framework 4.7.2 or newer.

IT Helpdesk Worker | Morehead State University | October 2023 - Present

- Answered a high volume of calls for the IT department, resolving ticketed issues on first contact.
- Dealt with the aftermath of a cyber-attack on the university.

MSU Association for Computing Machinery Vice President

Projects

Extra-Curricular: Pitcher Reports (Python Flask, HTML, CSS, JavaScript)

- Developed and deployed full stack of a python web app to interpret pitcher data for MSU Baseball across platforms. Marketed the website to other colleges. http://pitcher-analytics.org/about

Internship: Email Integration via NuGet Package (C#, Azure API) https://www.nuget.org/packages/ModernEmail

- Integrated and developed Email NuGet package across hundreds of enterprise C# applications
- Standardized email functionality across projects to reduce maintenance.

Capstone: Parallel Matrix Library & Neural Network (C++, OpenMP) https://github.com/WarmFreezer/neural_network

- Achieved 17x speedup over single-threaded baseline on 1000×1000 matrix multiplication using Intel SYCL USM.
- Built a modular C++ neural network API on top of the matrix library with dense layers, Adam optimizer, and cross-entropy loss; reduced training time 40% via batch-level OpenMP parallelism, outperforming PyTorch CPU on the UCI thyroid dataset.

Personal: Calculator Language Scanner and Parser

- Engineered a lightweight programming language scanner and parser in under 600 lines of C++.
- Implemented tokenization and syntax analysis, with some error codes.

Academic: Savecation (Python, Streamlit, Anaconda)

- Utilizing Software Engineering principles, I organized a 4-person team of peers to create a viable Python Web App.

Extra-Curricular: Eagle Recruitment (Python React)

- Led 4 person front and back-end teams in creating a web application for the Women's Basketball Team. Accessed NJCAA database via python and in process of developing Machine Learning Model to interpret dynamic web page data.

Skills

Programming Languages: C++, C#, C, Java, Python
Parallel & Systems: MPI, OneAPI, SYCL, OpenMP, Web App Design
Tools & Concepts: Git, GitHub, Linux, OOP, Debugging, Concurrency, Windows, Visual Studio, Web Applications
